GO

Pallet

The pallets of the GO range are equipped with a special structure (patented) that gives an optimal mechanical strength and are normally injection molded in recycled polyolefin resins. They are available in two versions (light and reinforced) and can be used as durable pallets and as one-way pallets with high performance

On demand they can also be molded with the floor closed (except of the hollow of the feet).

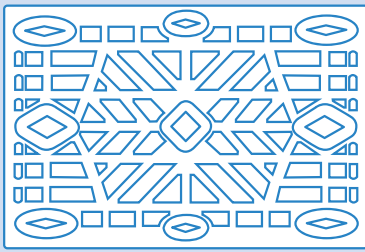

- molded in recycled polyolefin resins
- stackable and built-in
- anthracite coloured and available in other colours (for food products)

- cheap, easy to handle and light
- washable, no fumigation required
- available with CLOSED floor (minimum lot: a full truck)
